

PRODUCT USAGE

This product is recommended for indoor or outdoor use.

DESCRIPTION

The Bowflag® Basic is constructed of aluminum and fiberglass poles that are offered in six sizes, standing at a maximum height of 17'. This wind banner features a reinforced pole tip and graphics that extend to the pole sleeve instead of using poly-stretch header tape to increase your client's available advertising space. Assembly of the flag display is a breeze with no tools necessary. Your client's lightweight flagpole can be stored and transported effortlessly with the included economy bag or optional carrying case for extra security. Mount the Bowflag® Basic on one of our indoor or outdoor base solutions and use it to identify appropriate parking areas or to advertise an apartment for rent.
